

ZERTIFIKAT *

CO₂-VERMEIDUNG DURCH ÖKOSTROM

Wischemann Kunststoff GmbH

Am Langenhorster bhf 2, 48607 Ochtrup

has chosen green electricity from ENTEGA Plus GmbH.

The expected annual consumption of approximately 12.000.000 kWh will be generated using Skandi EU-Wind/PV no support technology and fed into the general electricity grid.

TÜV Rheinland confirms in an annual certificate of conformity that the supplied energy originates from the specified renewable sources and that your electricity consumption has been allocated to the tariff in the Guarantees of Origin Register of the German Environment Agency (Umweltbundesamt).

By purchasing ENTEGA green electricity, Wischemann Kunststoff GmbH avoids the emission of approximately 3.888 tonnes of the climate-damaging gas carbon dioxide (CO₂) each year, thus making a valuable contribution to climate protection. The calculation is based on the electricity labelling as of November 2024.

The contract period for the supply of green electricity is from 01.01.2026 bis 31.12.2026.
